

A

UNO surrogate for the Cahn-Hilliard equation: project pipeline

TRAINING (64 × 64 periodic box, uno_train.py)

B

UNO architecture (17.9 M parameters; widths 40/60/90/135; Fourier modes 20/10/5/2 per level)

one call maps $\psi(t) \rightarrow \psi(t + \Delta t)$ for any $\Delta t \in [1, 50]$ and any box size l (trained at $l = 64$, applied at $l = 128 \dots 256$)
